

# ASSESSMENT OF EFFECTS-BASED OPERATIONS USING TEMPORAL LOGIC

**Abbas K. Zaidi  
Lee W. Wagenhals  
Sajjad Haider**

10th International Command and Control Research and Technology Symposium  
The Future of C2  
McLean, VA  
June 2005

- **Effects Based Approach**
  - **Research Pedigree**
  - **Influence Nets**
  - **Timed Influence Nets**
- **Assessment**
  - **Temporal Analysis**
- **Application**
- **Conclusion**

- **Set of Actions/Tasks with Impact on Desired and/or Undesired Consequences**
- **The Political and Strategic Objectives Are to Achieve Certain Effects Subject to a Number of Constraints (e.g., Causal, Temporal, etc.)**
- **The Question:**  
**What Combination of Time-phased Actions/Tasks (COA) Will Produce The Desired Effects?**
  - **Determination of The Set of Tasks or Actionable Events**
  - **Determination of The Causal and Temporal Constraints**
  - **Formulation of an Analytical Framework for Modeling and Analysis**
  - ...

# Influence Nets

Probabilistic Belief Networks that use CAST Logic for Model Specification

- Actionable Events are Selected by Equating Corresponding Marginal Probabilities to 1
- The Posterior Probabilities of Effect Nodes are Calculated Using Bayes' Rule

- Variant of Dynamic Bayesian Network
- Time Delays on Arcs and Nodes

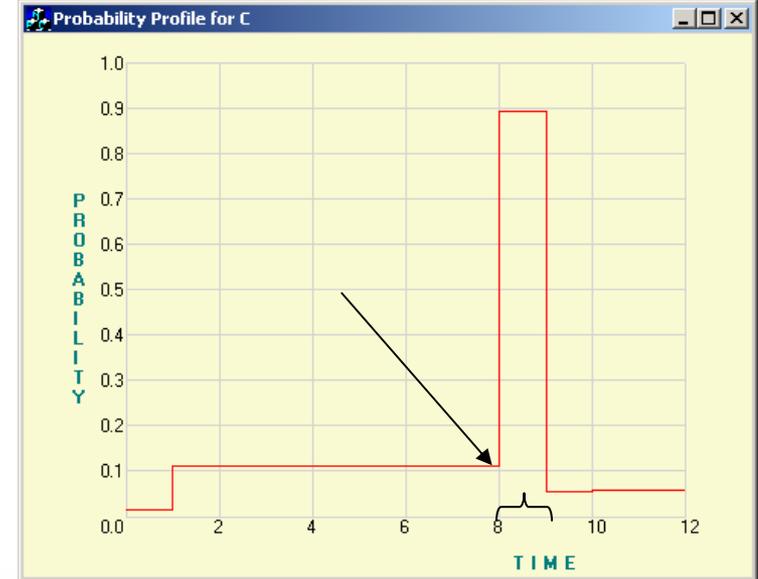

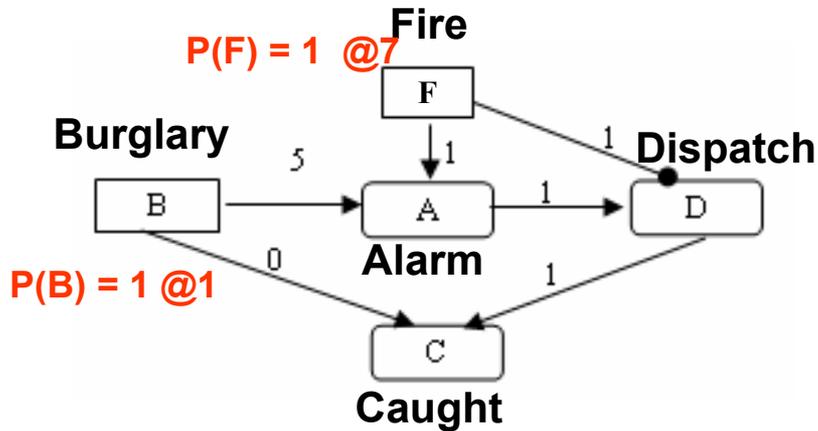

- **A Path from an Actionable Event to the Desired Objective Node Represents a Timeline**
- **The Timeline can be Shown as a Graph with Nodes Representing Events and Arcs between Nodes Representing Precedence Relation, e.g., Before**
- **Analysis**
  - **The Timelines for Individual Actionable Events can be Merged (Folded) together to Construct the Timeline for a COA**
    - **History of each Influence can be Traced on this Timeline**
    - **Queries Regarding the History of an Influence can be Answered**

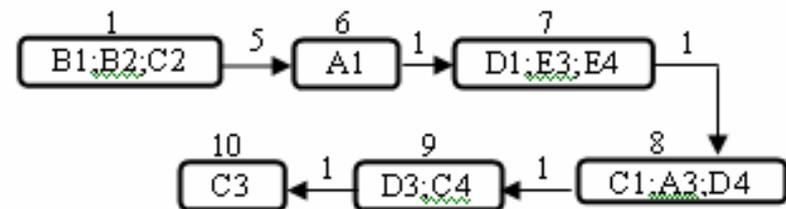

**OR**

- **The Time Stamps at the Objective Node(s) can be Specified and the Resulting Timing on the Actionable Events Can be Determined by Tracing Back the Timeline**
  - **What-If Analysis**

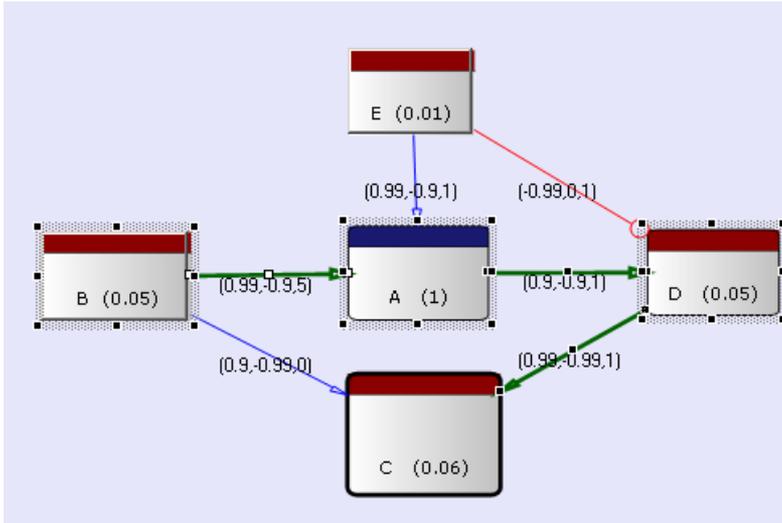

Action F is taken (or takes place) at time **7**

Action B is taken at time **1**

# Temporal Analysis

**Temper Query** [Close] [Maximize] [Minimize]

**Select a Node**: C
**Select a Time Stamp**: 8

Show Path(s) through which Action(s) Impact the Node at the Selected Time  
 Show All Nodes Changed at the Selected Time

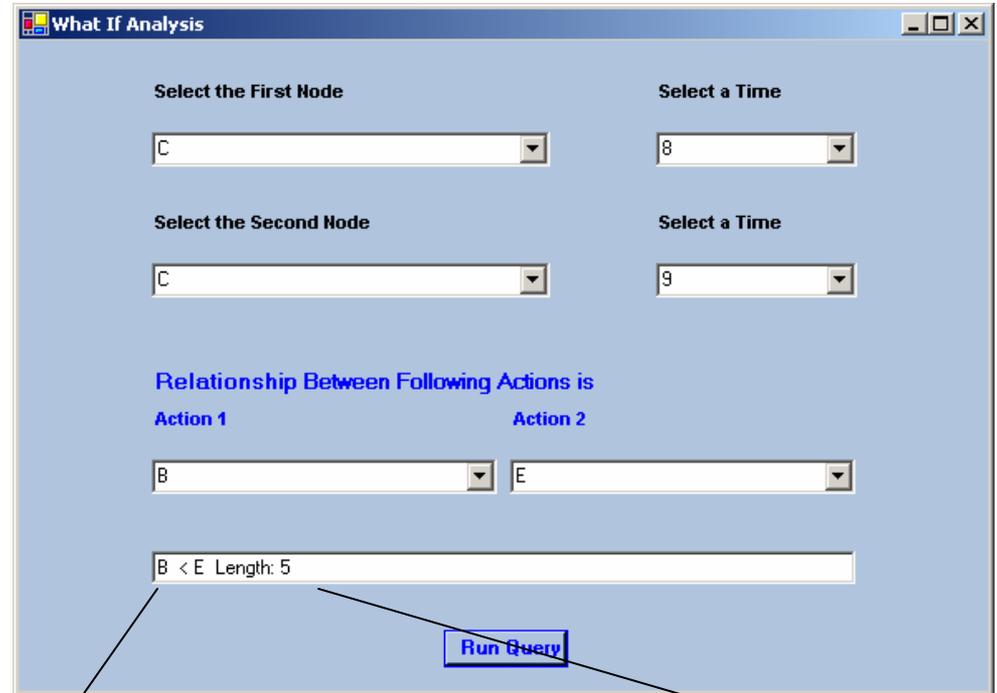

**The Change Occured Because of Action(s)**

B

**List of Nodes Change at the Selected Time**

C  
D  
A

Ok
Cancel

What If Analysis

Select the First Node: C

Select a Time: 8

Select the Second Node: C

Select a Time: 9

Relationship Between Following Actions is

Action 1: B

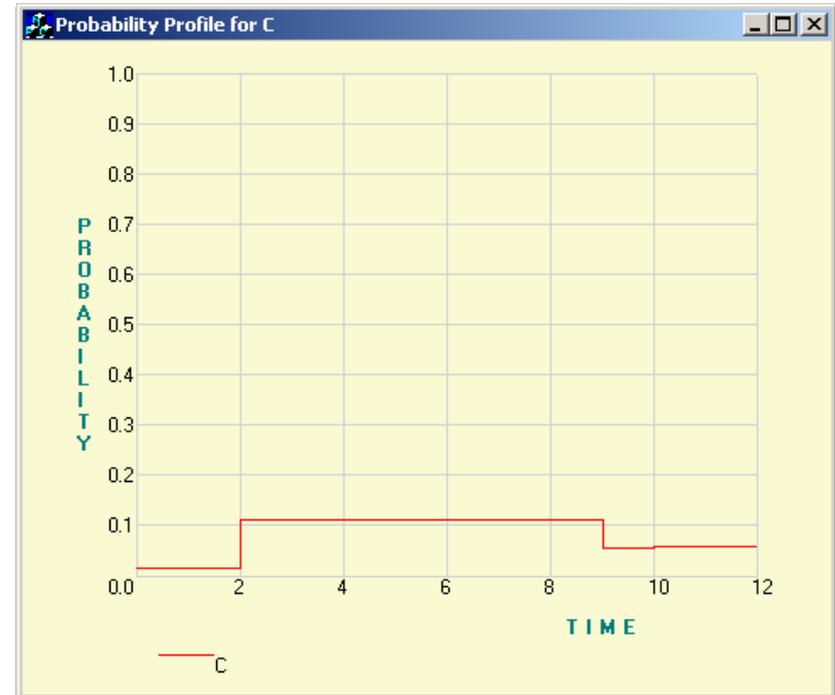

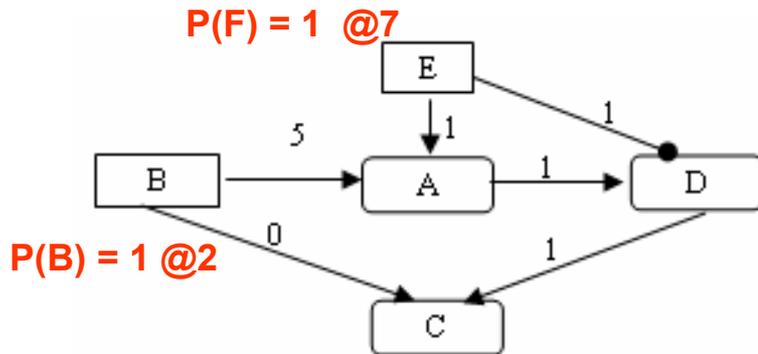

Action 2: E

B < E Length: 5

Run Query

What needs to be done in order to combine the impacts at time 8 and 9?

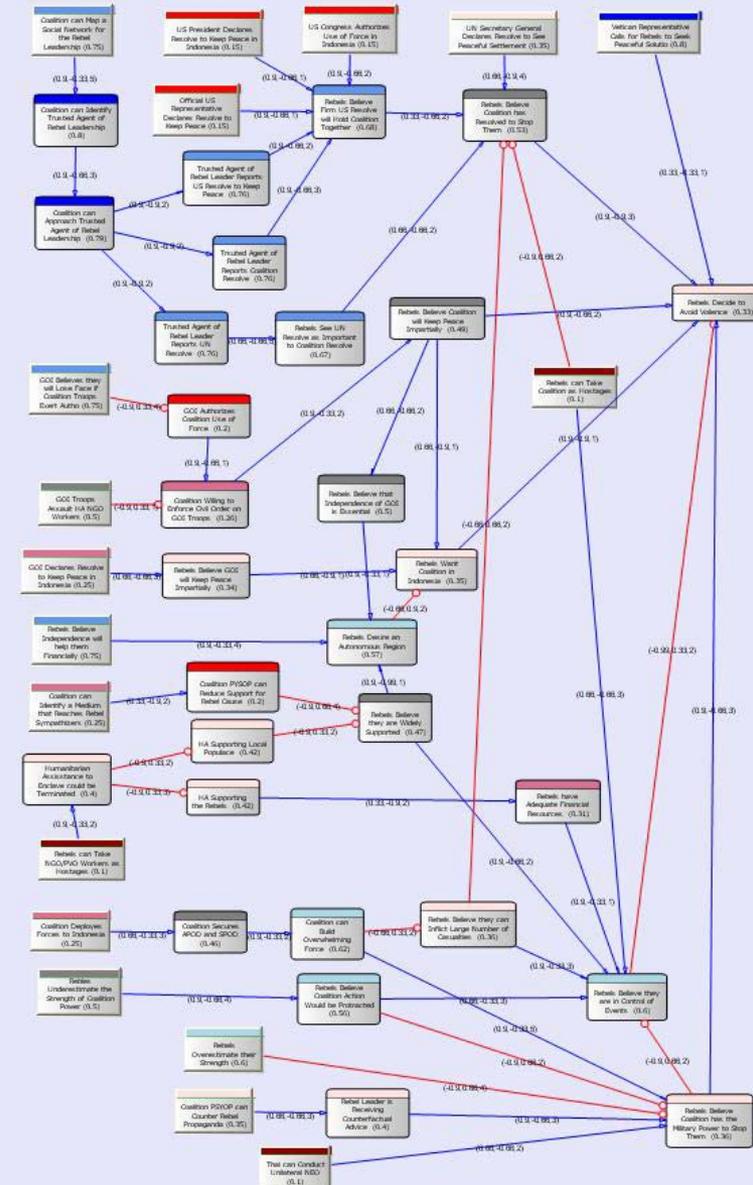

B must be executed 5 time units Before E

# Application

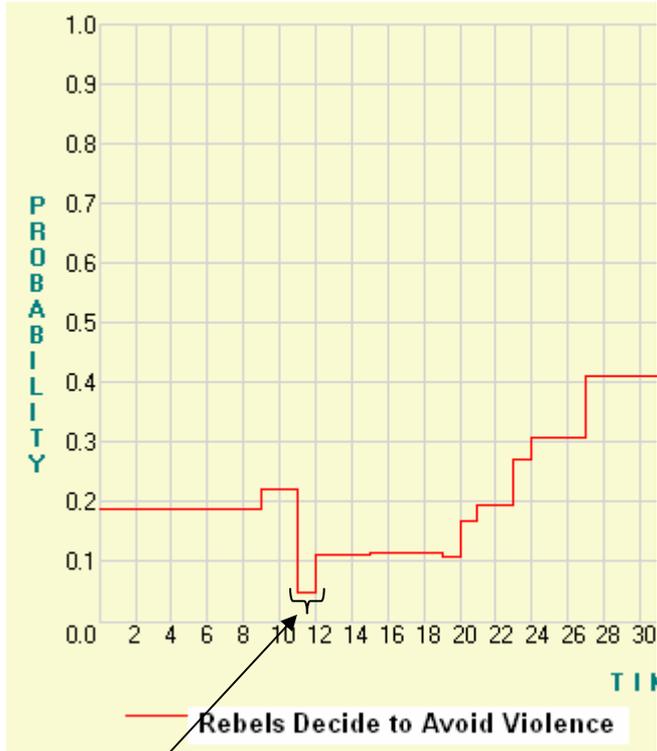

- East Timor Model Presented in Wage
- A Plausible but Fictitious Scenario with Potential Use of Formalism
- The Scenario:
  - Internal Political Instabilities in Ir
  - Ethnic Tensions Among Multiple
  - Conflict Between a Minority Rebel
  - Rebels Securing an Enclave of L
  - Tension Between Local Populatio
  - Role of Humanitarian Assistance
  - Role of Coalition Forces
  - ...
- The Actionable Events:
  - Potential Coalition, UN, and Rebel

**Temper Query**

Select a Node: Rebels Decide to Avoid Violence

Select a Time Stamp: 12

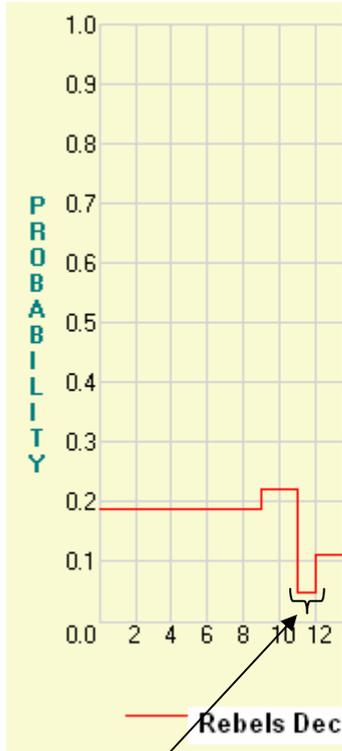

Show Path(s) through which Action(s) Impact the Node at the Selected Time

Show All Nodes Changed at the Selected Time

The Change Occured Because of Action(s)

*UN Secretary General Declares Resolve to See Peaceful Settlement*

Ok
Cancel

**What If Analysis**

Select the First Node:

Select a Time:

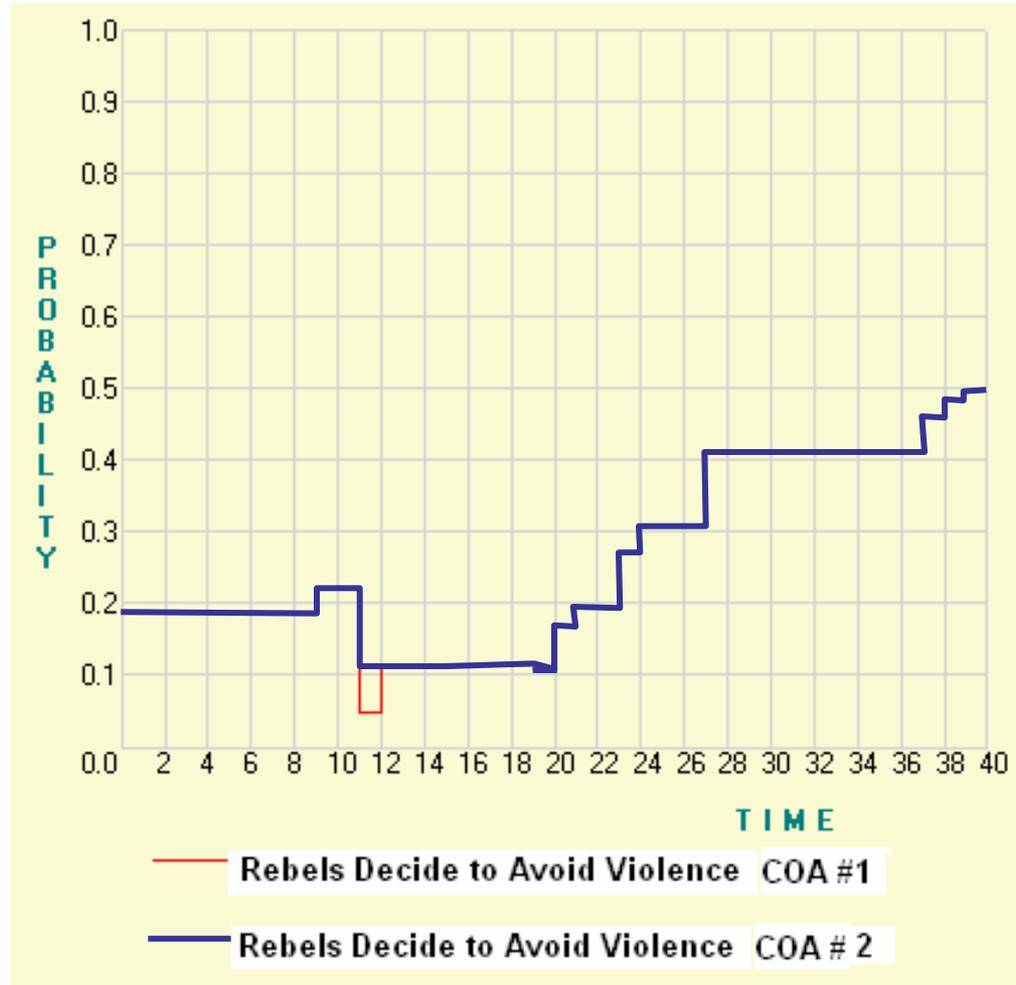

Select the Second Node:

Select a Time:

Relationship Between Following Actions is

Action 1	Action 2
<input type="text" value="Rebels can Take Coalition as Hostage"/>	<input type="text" value="UN Secretary General Declares Resolv"/>

**“UN Secretary General Declares Resolve to See Peaceful Settlement”**  
*Before*  
**“Rebels can Take Coalition as Hostage”**  
 by **2** Time Units

- **The Paper Presents a Tool for Assessment and Analysis of Courses of Action in a Timed Influence Net Model for Conducting Effects-Based Operations by:**
  - **Analyzing the Impact of Timing of Actions on the Likelihood of Desired/Undesired Effects**
  - **Fine-tuning Selected COAs for Generating Better Plans**
- **The Capability is Available in the Application *Pythia* Developed at the System Architectures Lab**
