## **Tasks**

# Danish Defense Management Project

# DeMap

**A Strategic Business Reengineering Project** 

# Danish Defense Resource Management System

# **DeMars**

An Integrated Enterprise Resource Planning system

# **Army - Navy - Airforce**

# Danish Army Command and Control Information System (DACCIS)

Planning
Decision
Execution
Of Army
Operations

Mainly at Division and Brigade level.

# **DACCIS** scope

- To improve Division and Brigade HQ's command and control capabilities in time and quality based on reliable and updated information.
- To create the basis for faster decisions and excution of orders on the modern fragmented battlespace.
- Support optimised use of the digitised battlefield.

# Overall user requirements...

- To create interoperability and a framework for Army CIS, including operational as well as administrative systems.
- To reduce time consumption in the planning and execution process wthin army units to get faster reaction and flexibility in the tactical control.
- To improve the quality in information processing and -presentation and thereby enable commanders to take decisions on an updated, consistent and well structured basis.
- To improve information exchange internally in the HQ as well as between HQ – national and international.
- To create possibilities for the use of simulation to train commanders, units and staff officers at battallion to corps level.

# **DACCIS** is not:

- Target Acquisition.
- Target Engagement.
- Weapon/Payload Delivery.
- Logistic Delivery System
- Peace Time Admin Support.
- Accounting, Personnel.

# **Future DACCIS plans**

- 2003: MIP tests.
- 2004: Finalise phase 1.
- 2005: First operational set-up.
- 2005/6: International operations.
- 2006/7: Further extensions within Danish Army.

# The future

# How to change from the present to the future involving NCW

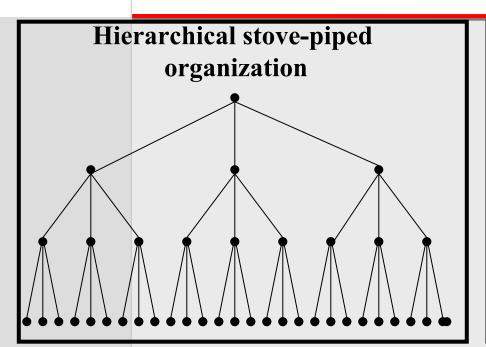

Example: The Army

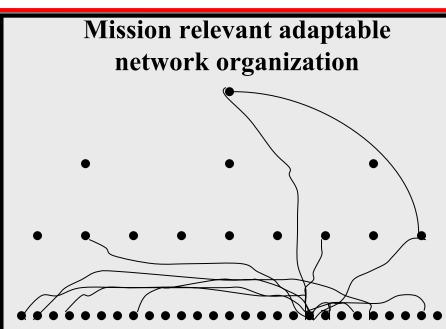

24

## ROYAL DANISH **DEFENCE COLLEGE**

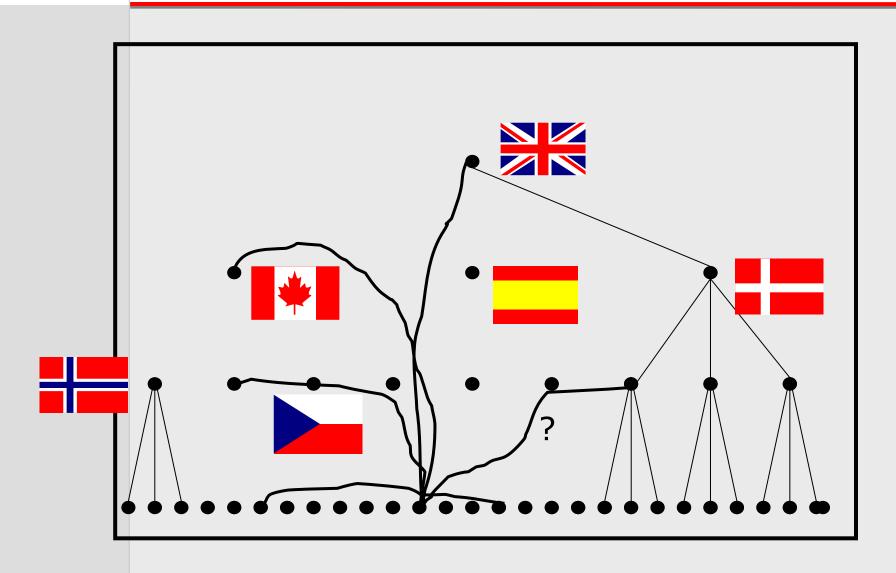

- Non-transparent organization.
- Stove-pipe simplex communication.
- Each organizational level corresponds to a time delay.
- The more vertical command the more time delay.

- Transparent organization.
- Network duplex communication.
- Networking reduces command levels and increases op tempo.
- The more adaptable organization the less time delay.

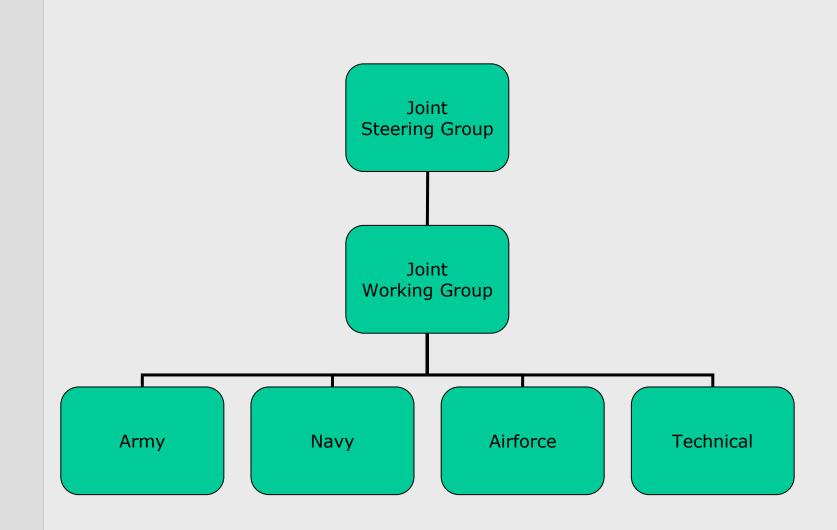

# Risk of unbalance in Multinational NCW

# **NBO** in Denmark

# The Overriding Principle

The Armed Forces can only solve their tasks when units and formations are fighting capable

# **THE END**
