

DSTC

**9th International Command and Control Research and
Technology Symposium Coalition Transformation**

Augmented Synchronised Planning Spaces

Peter Evdokiou, Bruce Thomas, and Rudi Vernik

CRC for Enterprise Distributed Systems Technology

Defence Science and Technology Organisation

University of South Australia

People

- **University of South Australia**
 - 3 Academic Staff
 - 7 Students
- **Australian DSTO (Defence Science and Technology Organisation)**
 - 7 Research Scientists
- **DSTC (Collaborative Research Centre)**
 - 3 Support Staff
 - 1 Research Scientist
- **Boeing Queensland**
 - Senior Engineer

Drivers for C2 Development

- Increase participation in the situation awareness and creative process of C2
- Add rigour and quality to the generation of plans, and dissemination of information
- Reduce the time spent on repetitive and duplicated work
- Increase the flexibility of C2 structures and mix
- Increase robustness of the transmission of the commander's intent and products of the HQ to external units
- Reduce the time, costs and stress of the establishment and maintenance of the deployed HQ

What is AuSPlanS?

- A Defence domain project.
- Application and extension of LiveSpaces
- Distributed synchronised planning in organisations
- Rapid augmentation and enablement of physical workspaces
- Using emerging ubiquitous and HCI technologies.

AUSPLANS Approach

- Understand key issues and problems to be addressed
- Use and extend LiveSpaces concepts and technologies
- Include key existing defence related software components
- Develop a research platform
- Take an incremental approach
- Orchestrated Evaluation Sessions

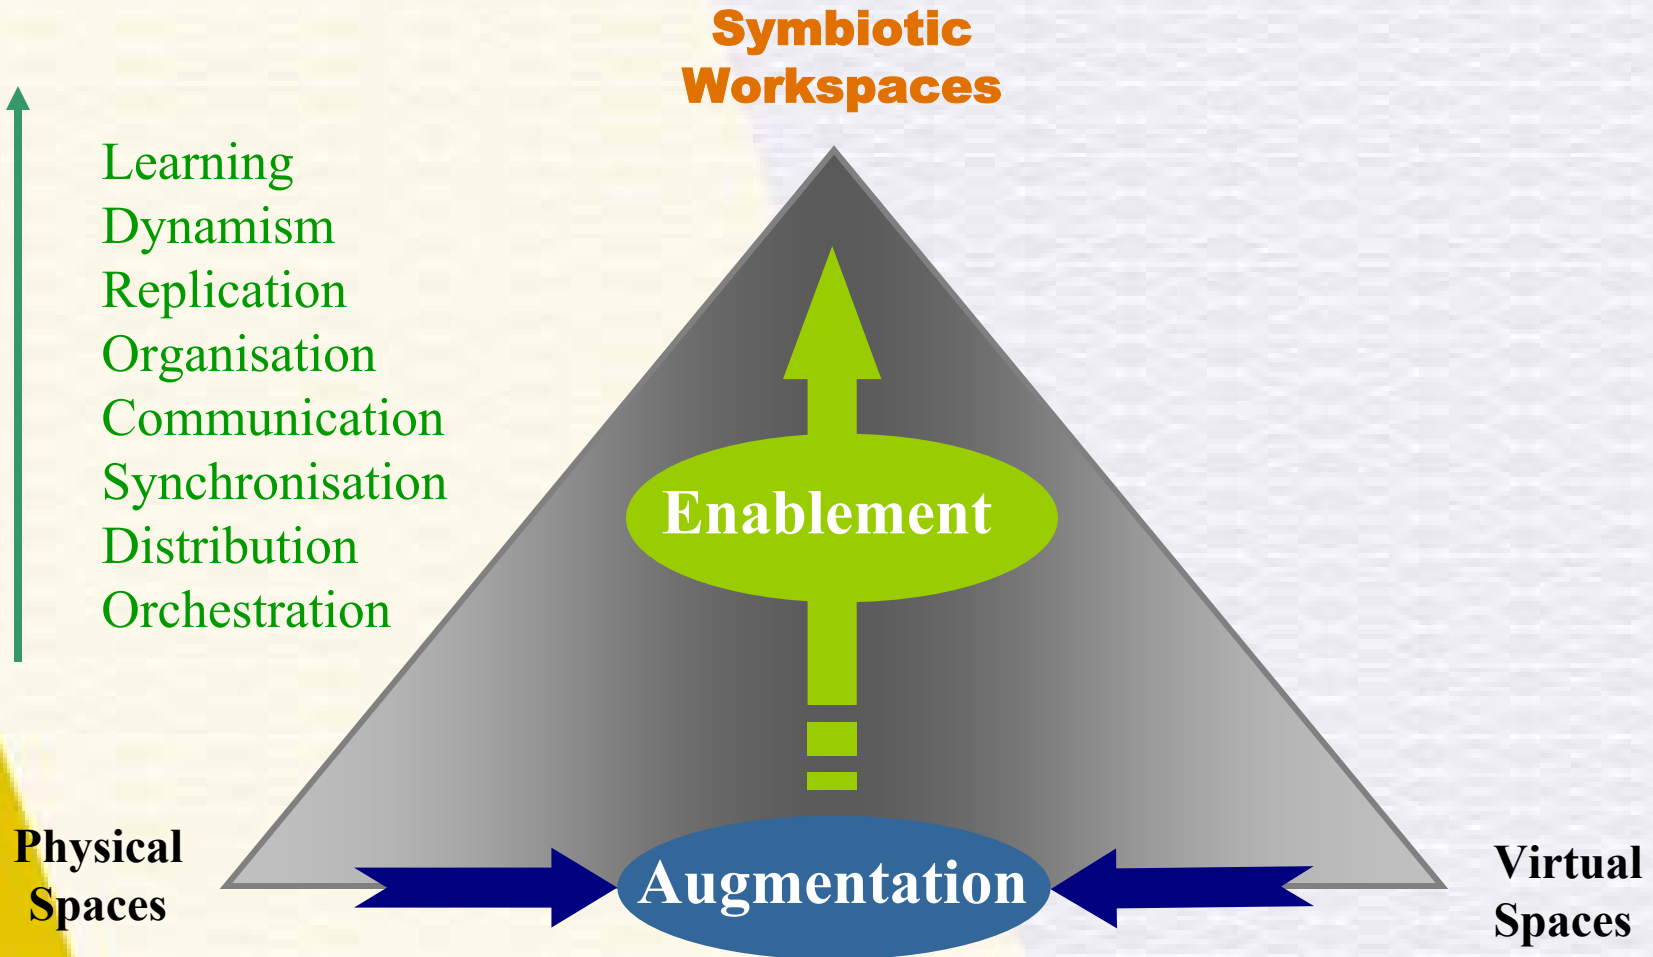

Focus: Collaborative Workspaces in Defence

Symbiotic Workspace Concepts

LiveSpaces

“Enterprise Enabled Ubiquitous Workspaces”

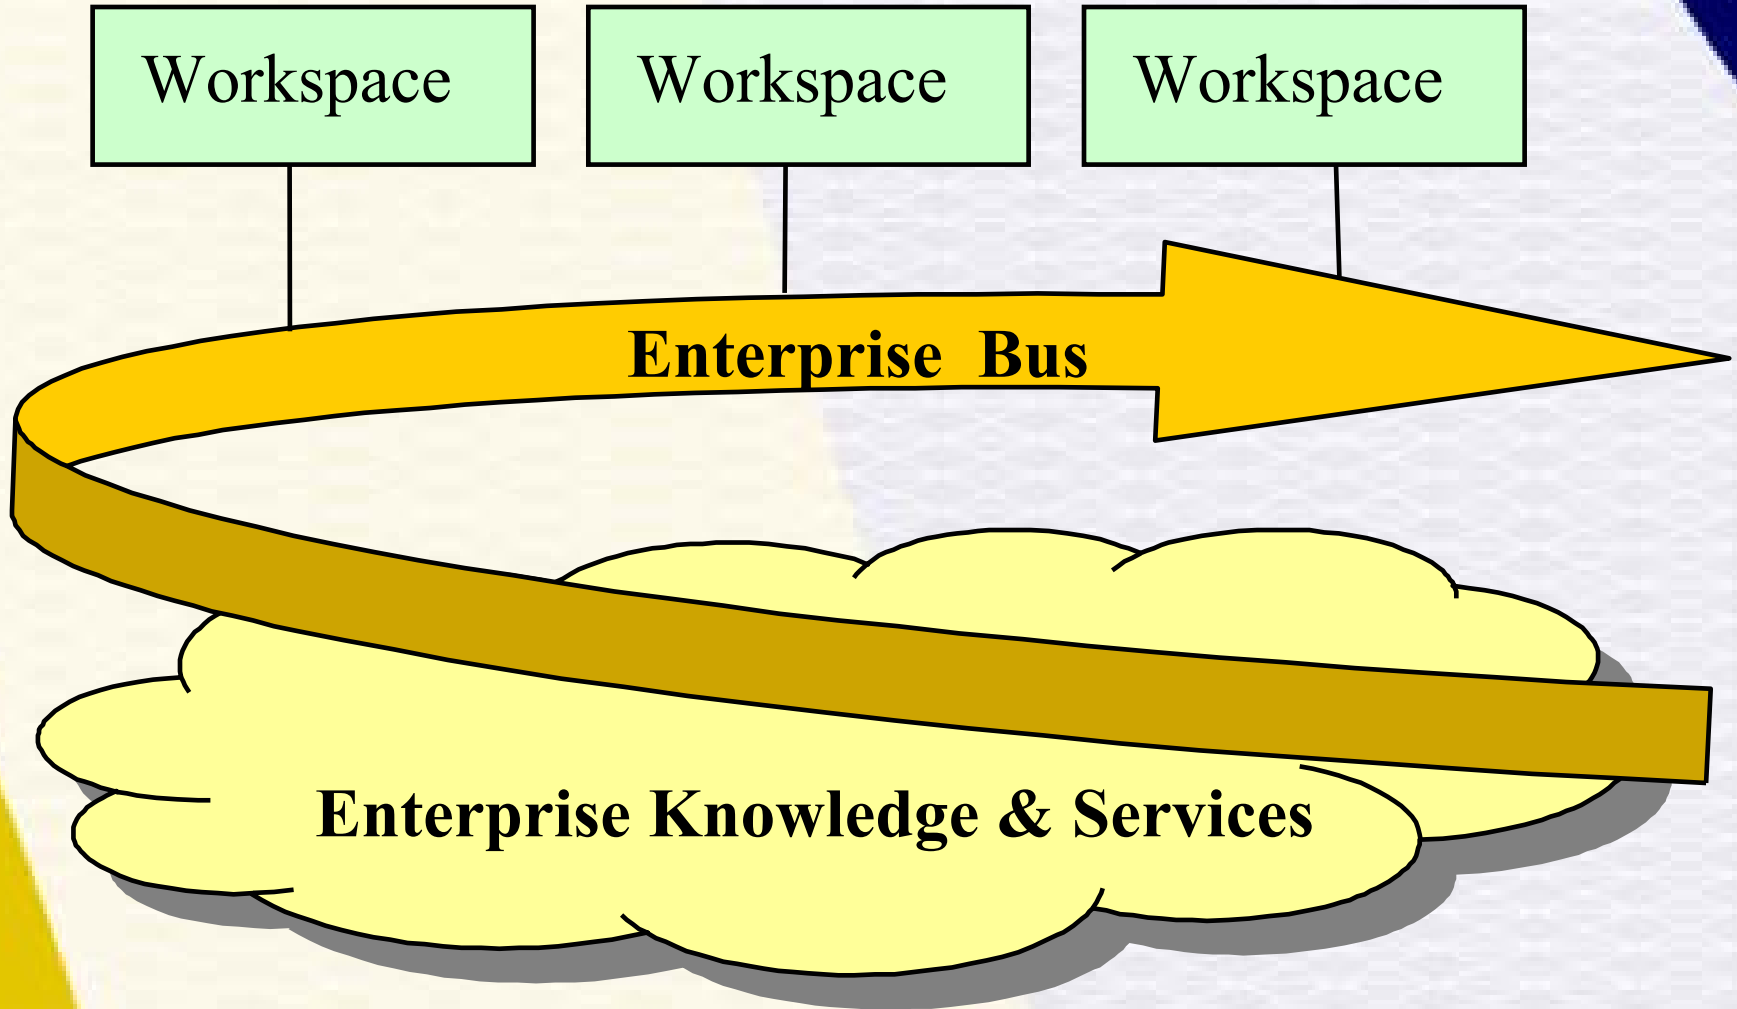

- **Live!** - reflects the fact that the environment is dynamic (or alive) in that it changes depending on its context of use
- **Space!** - reflects the notion of through-wall environments that allow participation from individuals in other locations (or spaces)

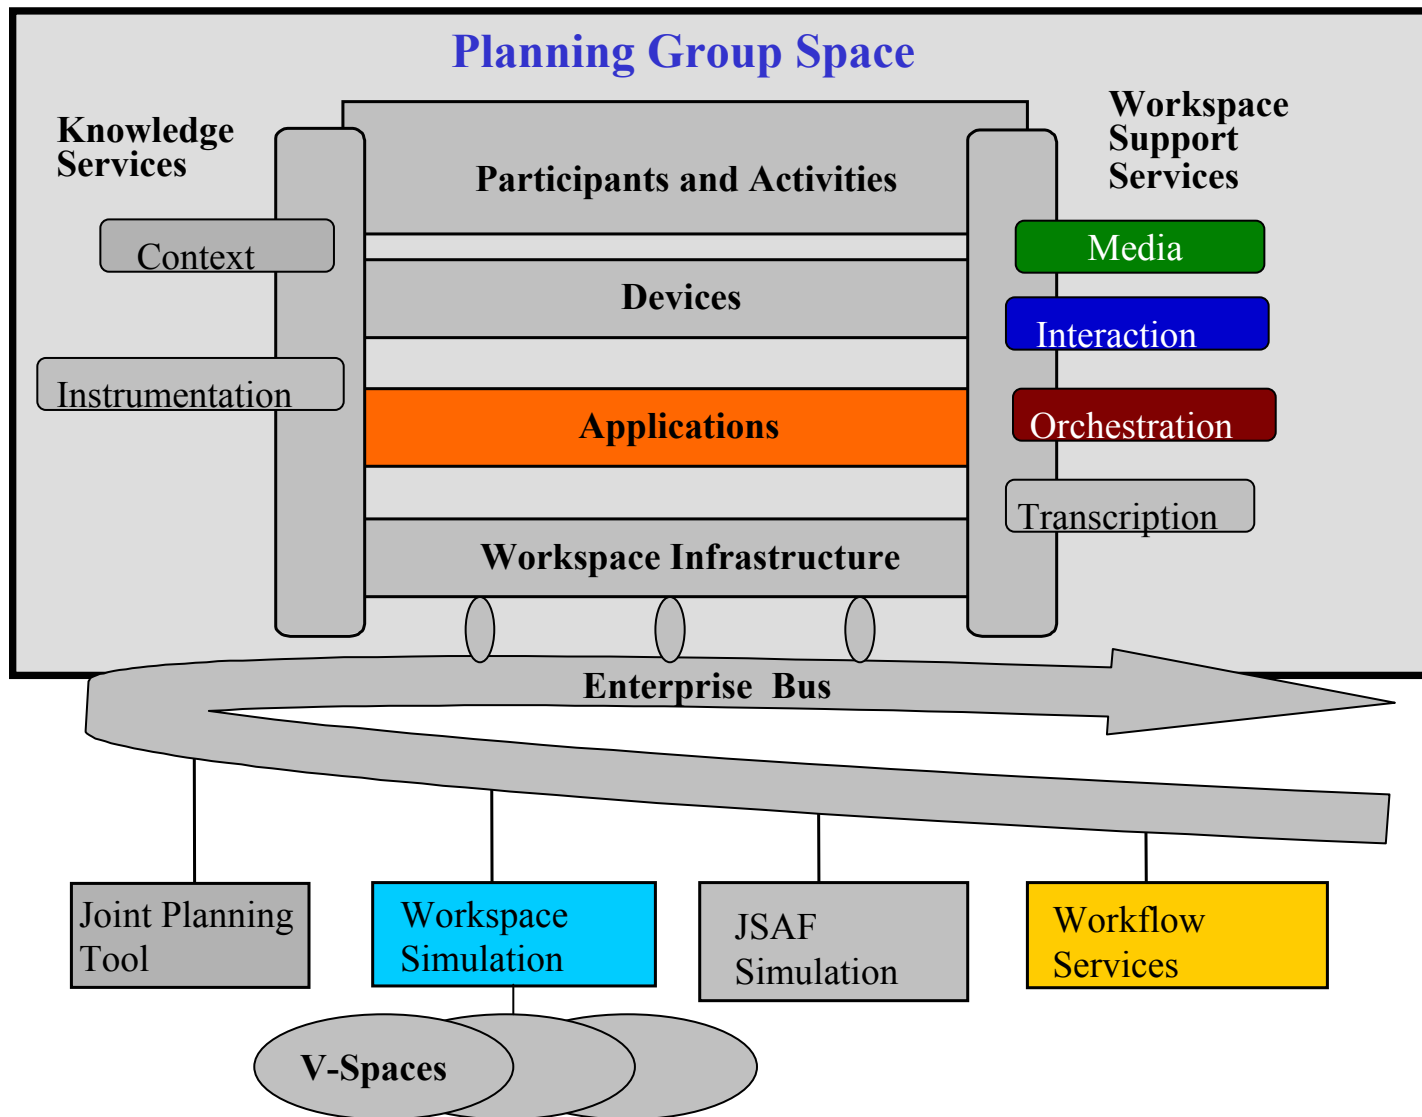

Characteristics of LiveSpaces

- Deployable and replicable
- Rapid set up and adaptation
- Ubiquitous interaction between people, technologies, and information
- Automated support for procedural and cognitive activities
- Synchronisation of spaces
- Enterprise enabled

Distributive LiveSpaces

AUSPLANS Orchestrated Evaluation Session

Orchestrated Evaluation Session

- **Prototype meta-application**
 - supports orchestrated evaluation of ubiquitous workspace technologies
 - in context of a defence domain specific scenario
- **Demonstrates the technologies**
 - scenario driven
 - free play
- **Provides method of recording results/feedback**

AUSPLANS Orchestrated Evaluation Session 1

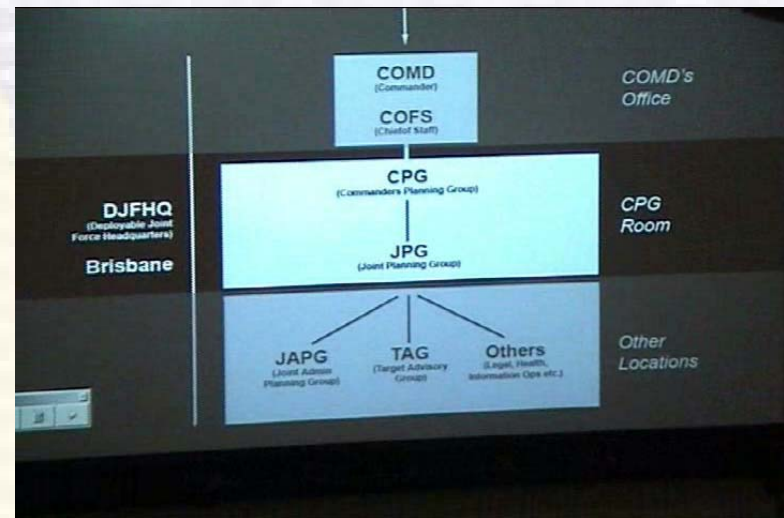

- The main aims of the exercise were as follows:
 - Provide a brief on a new meta application to support orchestrated evaluation of ubiquitous workspace technologies in the context of a defence domain specific scenario.
 - Evaluate new ubiquitous workspace technologies to support augmented synchronised planning spaces.

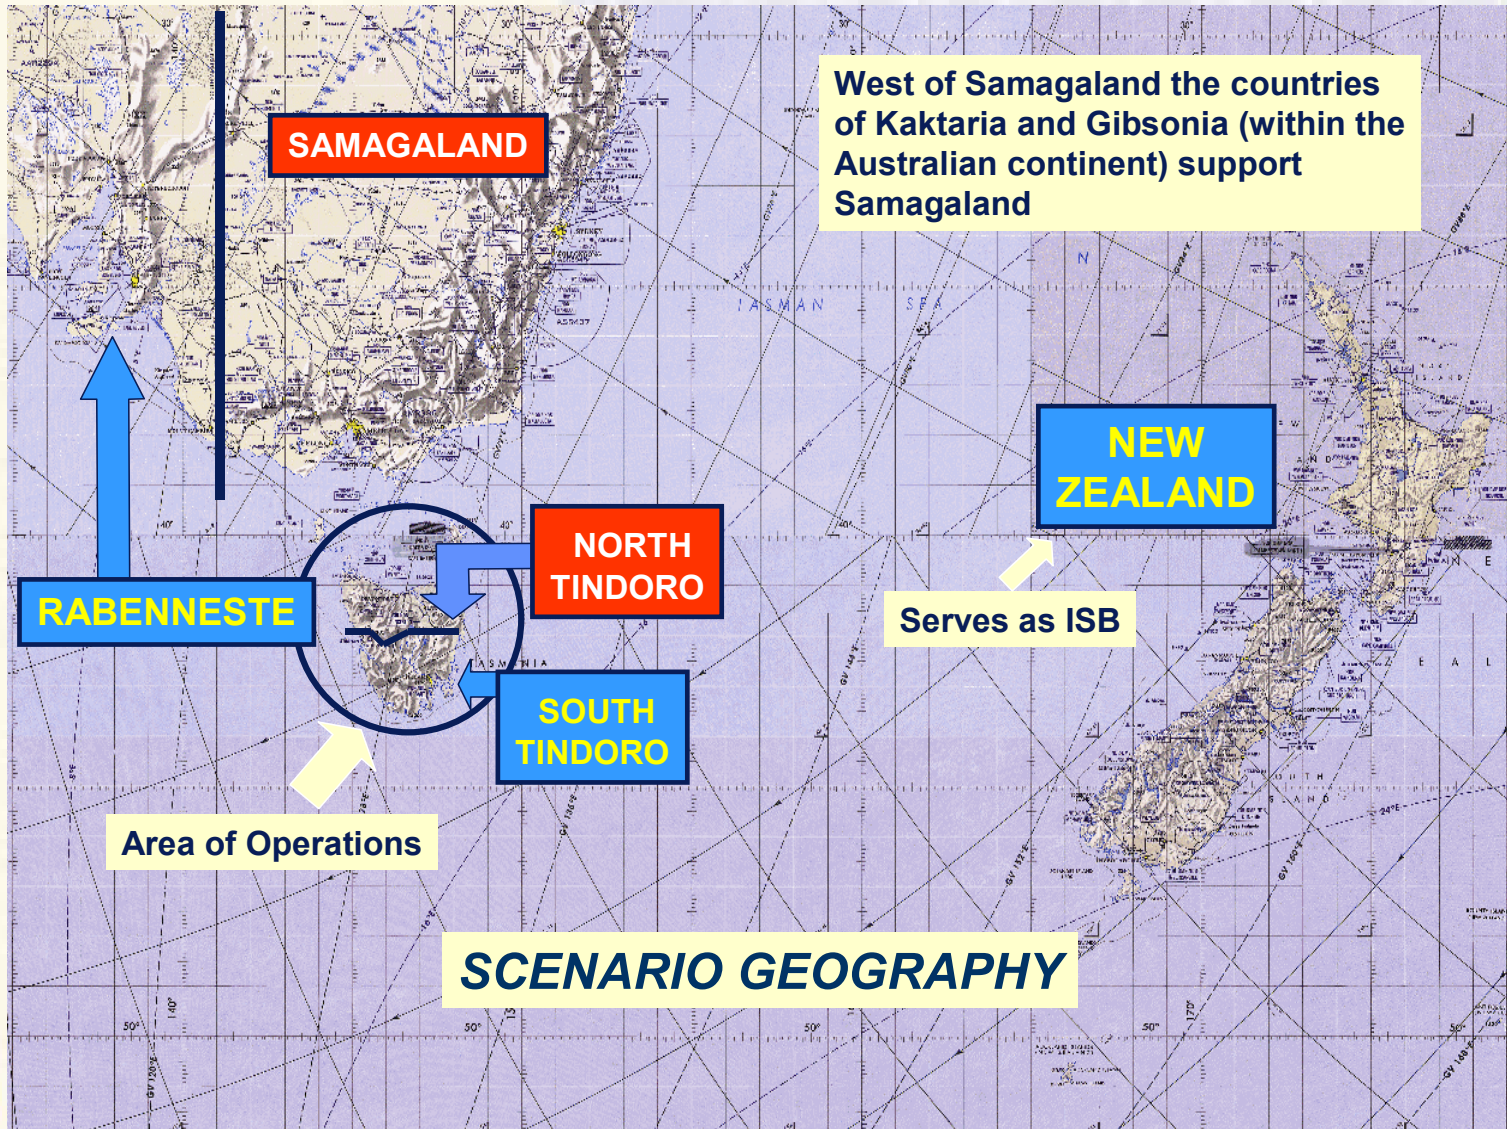

Infrastructure

Scenario

Driving Scenario: Tasman Scenario Set

Scenario Components

- **Disaster Relief**
 - Tech Ex 1
- **Evacuation**
 - Tech Ex 2
- **Peace Enforcement**
 - Tech Ex 2

Session 1 - 2 main sections

- **Section 1 - Commander's Video Conference.**
- **Section 2 - Commanders Planning Group Mission Analysis**

Each section

- **An introduction to the technologies**
- **An automatic demonstration was conducted to show the use of the technologies in context.**
- **Stakeholders have an interactive evaluation of the technologies.**

Evaluation

The First Orchestrated Evaluation

- The Orchestrated Evaluation **was a success.**
- There was a full day on the 26th of Feb.
 - The morning session of operating the meta-application of the evaluation.
 - The afternoon consisted of workshopping future directions.

Roadmap

- **(Feb 04 : UniSA) -**
 - proof of concept demonstrations
- **(Oct 04 : DSTO Adelaide) -**
 - integration of advanced planning and situation awareness technologies
- **(Oct 05 : DJFHQ Brisbane)**
 - multiple synchronised spaces
 - transitioning
 - Vital Development exercise

Summary and Conclusions

- **AuSPlanS**
 - defence domain project
 - coordinated by the DSTC SA
 - DSTC, DSTO, UniSA, and Boeing
- **Focuses**
 - application and extension of LiveSpaces
 - distributed synchronised planning
 - in areas such as disaster relief, evacuations, and peace enforcement.

Questions?

Planning

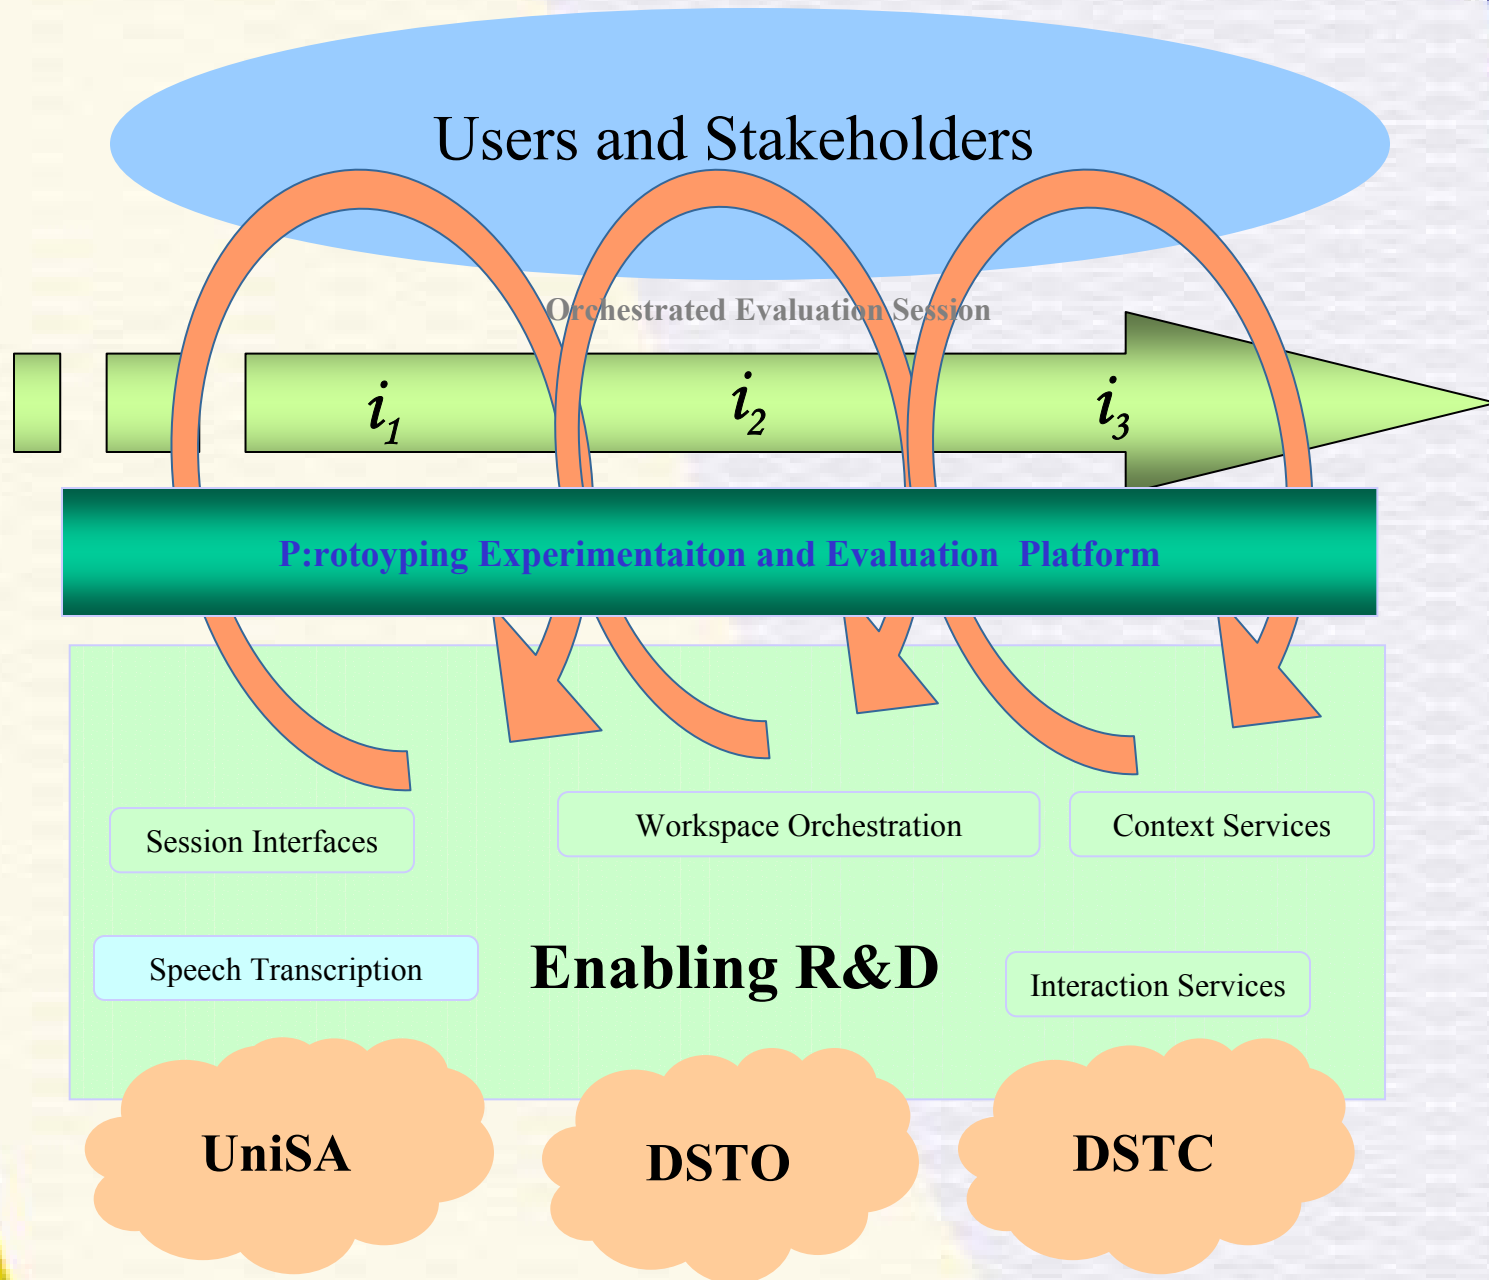

- **Structured distributed group process**
 - JMAP, JIPB, and JAPB
 - In real life the process is not often structured
- **Outcome focussed**
- **Information aggregation and synthesis**
- **Cr**

Science and Technology Areas

- Ubiquitous Computing
- Enterprise Systems Architectures and Infrastructure
- Human Interaction Technologies
- Wearable Computing
- New Media (virtual/augmented reality)
- Workspace Simulation
- Experimentation/Evaluation Approaches

Interaction Services

UniSA

DSTO

DSTC

AuSPanS Testbed - Software

- LiveSpaces infrastructure
- Pre-planning and information management
- Workspace simulation engine(s)
- Visualisation Services
- Awareness and Synchronisation
- Speech Transcription Services & applications
- Session Interfaces
- Workspace Orchestration Service
- Interaction Services
- Context services

Orchestrated Evaluation Session Infrastructure

- **Workflow**
 - Orchestrates the session
 - Breeze/ODSI/Elvin
- **Interaction**
 - Interaction between participants (and other systems) and devices in workspace
 - iROS
- **Workspace Simulation**
 - Provides virtual workspaces to interact and collaborate with
 - Brahms
